1. What?

DataTables plugin for Laravel takes care of your problems while making DataTables server side processing. Without it, you will have to write a lot of code in order to take advantage of possible DataTables functionality.

2. Why?

To remove all of the "where", "join" and other possible queries that should be written every time you want to use server side processing.

```php
public function getBasic() {
    return view('datatables.eloquent.basic'); }
public function getBasicData() {
    $users = User::select(['id', 'name', 'email', 'created_at', 'updated_at']);
    return Datatables::of($users)->make(); }
```

3. How?
